What Do You Mean I'm a Slut?!?" - Joshua O. Corum 2012

"What Do You Mean I'm a Slut?!?" is often used in academic literature and pejoratively proliferated among society at large. The definition of promiscuity has not been clearly and consistently defined within research and varies significantly from person to person. However, both research and society continue to utilize this term with the assumption of a universal meaning. This study investigated how individuals construct their personal definition of promiscuity and how the subsequent label is applied to others. This thesis also examined how the definition of promiscuity is constructed within the collective conscience and how social institutions influence that definition. The relationship between the collective conscience and social institutions is analyzed using concepts from labeling theory and Foucault's biopower. An extensive online survey was used to collect data from 210 respondents in the Louisville Metro area. The survey employed a quantitative and qualitative mixed methods approach, incorporating fixed answer and open-ended formatted questions. Five elements of promiscuity emerged from the qualitative analysis of the data: Number of Sexual Partners, Personal Connection, Time, Casual Attitude, and Unsafe Sex Practices. The quantitative analysis of these five elements indicated Relationship Status interacted with Casual Attitude; those not in a partnership were more likely to refer to casual attitudes on sex as an element of promiscuity. Two factors, Age and Sexual Double Standard Scale score, interacted with Unsafe Sex Practices. Younger respondents and those with lesser adherence to the sexual double standard were more likely to refer to unsafe sex practices in their definition of promiscuity. Additional analyses conducted were conducted to examine the interactions between the same factors and how an individual quantifies promiscuity as relationship to number of sexual partners. Respondents provided a numeric threshold for the promiscuity of a woman and a man. The analysis found three factors - Race, Sexuality, and Religiosity, affected the thresholds provided by respondents. Overall, the results of this study confirm the notion that promiscuity is a nebulous concept and provides support for challenging the use of this term in both future research and society alike.

What Do You Mean I'm Not Covered? - Melissa Hudson 2016-02-10

Most of us live in a world that is so busy, we often fail to take care of some of the important small stuff. Then something big happens... We have a fire at our house and our lives fall apart in a moment before we even. Panic sets in and the second thought is insurance. Am I covered? As a professional in the insurance business I ran into coverage questions every single day. My concern is the amount of people that don't know what they are covered for, how much their deductible is or even what a deductible is! The number of people who pay for something but yet they don’t know what they are paying for or even if what they are paying for is what they really need is astronomically huge. Would you buy a house simply from a description but without seeing a photo of it? Without walking through it? Without knowing its history or its location? Probably not! But everyday people buy insurance and they don’t understand it. They think they have coverage for things that they don’t. And they don’t look at their policy until they need it. We wrote this book to help people realize the importance of understanding insurance, what they are buying and why.
