This publication is a useful guide for general physicians, gastroenterologists, and geriatricians.

Management of Gastrointestinal Diseases in the Elderly

The study of a disease in the elderly is different from the study of the disease in the young, and in many cases, the correct approach to management of a disease in the elderly is different from the approach used in the young. Therefore, the elderly patient must be considered a distinctive medical entity. This publication reviews the diagnosis and management of common diseases of the elderly, including those that are specific to the aging population, as well as the management of disorders of the bowel and liver, and nutrition. This publication is a useful guide for general physicians, gastroenterologists, and geriatricians.
