Original. 30,000 first printing.

Children's Drawings-Stella Agnes McCarthy 1924

We All Have Different Abilities-Melissa Higgins 2012 “Simple text and full color photographs differ and varied abilities”-Published by publishers.

The Abilities of Gifted Children-Editha P. Perdue 1990 The book is designed as the primary text for courses that seek to introduce students and readers to the nature and nurture of giftedness. It contains strong introductory material, making it accessible to both undergraduate and graduate students. Chapters address the following topics: the study of gifted students; ability and environment; intelligence constructs; creativity constructs; special honors–eminent, leadership, and careers; academically talented children; and talent in the arts. Nonscience performance art and typical gifted development; precocious development; inhibited development–underachievement; unidimensional development; poverty, and minority gifted children; and methods of talent development. Extensive references are included. (DB)

Gross Motor Skills in Children with Down Syndrome-Patricia C. Winders 1997 Children with Down syndrome reveal gross motor skills – everything from rolling over to running but need additional help and encouragement to maximize their development. In this book, the author, a physical therapist, shares her experience gained from sixteen years ago spent specializing in Down’s Syndrome. This book provides parents and professionals with essential information about motor development including the impact of temperament and the effect of physical and medical conditions associated with Down syndrome.

Smart baby: development from birth to three months-Vera Kuzmenko 2021-02-20 A series of books “Smart baby: development from birth to 1 year old” reveals the secrets of the successful physical and mental development of an infant. The series was written by a specialist in the field of child psychology in collaboration with a young mother. The series of books offered to the readers’ attention is designed primarily for parents of babies (from birth to 1 year old), and will also be useful for baby sitters, teachers of early development groups, psychologists, teachers and students. In your newborn baby developing successfully what are the characteristics of mental development norm for each month of a baby’s life? What potential for a child’s talent can be seen? What should you pay special attention to? How to educate and how to entertain? How to activate the first sensory, speech and communication skills, what “vitamins” are necessary for a baby for successful cognitive development? What kind of developmental gaming activities to conduct in order to boost the capabilities of the baby as early as possible? What advice for parents of babies from birth to 1 year old? You can find answers to these and many other questions about early infant development in this book series. In the first book of the series “Smart baby: development from birth to 3 months” we will talk about the general, physical and material preparation for the birth of a baby, about what to buy and what not to buy. About whom newborns is and how to check the readiness of a newborn yourself at home. How do development movements, boost first senses, activate cognitive and sensory abilities. How to teach a baby to interact with people, to develop a sense of balance in different situations. How to develop the baby's motor activities for each month, useful toys and important achievements for a baby in every period of life.

The Toddler Brain-Laura A. Jana 2017-02-14 What if, despite the best of intentions, we are raising our children to succeed in a world that no longer exists? The Toddler Brain helps parents recognize the connections that exists between their own parenting behaviors and their child’s ability to acquire valuable twenty-first century skills. Dr. Jana explores the importance of play, perspective-taking, imagination and empathy, and strategically strengthens children’s unique connections in their first five years.

Children of the Dispossessed-BARRY NORMAN 1999 Examining early intervention programs initiated in the 1970s that were designed to facilitate intellectual development of at-risk groups of children provides valuable information about program development and can act to facilitate discussion regarding the early development of various programs. This book is an updated account of Project Enhancement, a preschool program established in Australia almost 30 years ago. It reviews the evolution of intelligence and alternative terms to clarify the contemporary semantic muddle. Chapter 2 examines the controversy regarding whether environmental factors, social service, or children’s as well as the world of business and innovation to show parents how to equip their children with seven key skills. Dr. Jana explores the importance of play, perspective-taking, imagination and empathy, and strategically strengthens children’s unique connections in their first five years.
