Attempts have been made to search other factors responsible for such evolution. The delineation of physical features within the city has been done due emphasis including the differentiation between the cities of the eastern and those of the western or northern India have also been described. Towns in medieval England-1987-03-02 This is the first collection of translated sources on towns in medieval England. It draws on the great variety of written evidence for this significant and dynamic period of urban development, and invites students to consider for themselves the challenges and opportunities presented by a wide range of evidence. The editors have introduced and translated the extracts within the larger context of European urban history, against a longer chronological backdrop and in relation to the most up-to-date research. Suggestions for further reading enable the student to engage critically with the material. Collectively, the texts and commentary provide an overview of English medieval urban history, while the emphasis throughout is on the particular character and potential of each type of written evidence, from legal and administrative records to inventories of ships, and letters and poetry to legendary civic histories.

Wessex to 1000 AD-Barry Cunliffe 2007-06-01 Wessex – the ancient counties of Dorset, Somerset, Wiltshire, Hampshire and Berkshire – is remarkable for its administrative and social cohesion as a region, and for the extraordinary wealth of its great monastic and famous sites in their full cultural context. His chief concern, however, is to interpret the landscape of the region, and the people who over so many centuries created it. In his hands it becomes an archaeological artefact as eloquent as Avebury and Stonehenge themselves.

Britain B.C.-Francis Pryor 2003 Based on new archaeological finds, this book introduces a novel rethinking of the whole of British history before the coming of the Romans. So many extraordinary archaeological discoveries (many of them involving the author) have been made since the early 1970s that our whole understanding of British prehistory needs to be updated. So far only the specialists have twigged on to these developments; now, Francis Pryor broadcasts them to a much wider audience. Aided by aerial photography, coastal revision (which has helped expose such coastal sites as Seahenge) and new planning legislation which requires developers to excavate the land they build on, archaeologists have unearthed a far more sophisticated society than the Ancient Britons than has been previously supposed. Far from being the woaded barbarians of Roman propaganda, we Brits had our own religion, laws, crafts, arts, trade, farms, priesthood and royalty. And the Scots, English and Welsh were fundamentally one and the same people.

English and French Towns in Feudal Society-I. H. Hilton 1995-06-04 This is a comparative study of the role of English and French towns in feudal society in the middle ages. In bringing together much material which dissolves old categories and simplifications in the study of medieval towns, Professor Hilton provides an important new perspective on medieval society and on the nature of feudalism. He argues that many Roman towns remained important places on the landscape, despite losing most of their urban character by the fifth century. Beginning with the early medieval period, Professor Hilton traces the development of towns up to the eleventh century, emphasizing the changing nature of urban life and the ways in which urban social structures fit into the larger social and political context of the time.

Social Identity in Early Medieval Britain-William O. 2001-01-01 Social identity is a concept of increasing importance in the social sciences. Here, the concept is applied to the often atheoretical realm of medieval studies. Each contributor focuses on a particular topic of early medieval identity - ethnicity, national identity, social location, subjectivity/personhood, political organization, kinship, the body, gender, age, prestige/rank, memory and ideological systems. The result is a pioneering vision of medieval social identity and a challenge to some of the received generalisations about this period.

Margery Kempe could not read or write, and dictated her remarkable story late in life. It remains an extraordinary record of human faith and a portrait of a medieval woman of unforgettable character and courage.

Contesting the City-Christian D. Liddy 2017-08-24 The political narrative of late medieval English towns is often reduced to the story of the gradual intensification of oligarchy, in which power was exercised and projected by an ever smaller ruling group over an increasingly subservient urban population. Contesting the City takes its inspiration not from English historiography, but from a more dynamic continental scholarship on towns in the southern Low Countries, Germany, and France. Its premise is that scholarly debate about urban oligarchy has obscured contemporary debate about urban citizenship. It identifies from the records of English towns a tradition of urban citizenship, which did not draw upon the intellectual legacy of classical models of the citizen. This was a vernacular citizenship, which was not peculiar to England, but which was present elsewhere in late medieval Europe. It was a citizenship that was defined and created through action. There were multiple, and divergent ideas about citizenship, which encouraged townsmen to make demands, to assert rights, and to resist authority. This volume exploits the rich archival sources of the five major towns in England - Bristol, Coventry, London, Norwich, and York - in order to present a new picture of town government and urban politics over these centuries. The power of urban governors was much more precarious than historians have imagined. Urban oligarchy could never prevail - whether ideologically or in practice - when there was never a single, fixed meaning of the citizen.

Fortified Settlements in Early Medieval Europe-Ned Christie 2016-08-31 Twenty-three contributions by leading archaeologists from across Europe explore the varied forms, functions and significances of fortified settlements in the 8th to 10th centuries AD. This volume will be of interest to historians, archaeologists and others working with evidence of fortified settlements, including archaeologists, historians, art historians and social scientists.

Early Medieval Britain Pum J. Crabtree 2016-06-07 The growth and development of towns and urbanism in the pre-modern world has been of interest to archaeologists since the nineteenth century. Much of the early archaeological research on urban origins focused on regions such as Mesopotamia, Egypt, and Mesoamerica. Intensive archaeological research that has been conducted since the 1960s, much of it as a result of urban redevelopment, has shed new light on the development of towns in Anglo-Saxon England. In this book, Pamela Crabtree uses up-to-date archaeological data to explore urban origins in early medieval Britain. She argues that many Roman towns remained important places on the landscape, despite losing most of their urban character by the fifth century. Beginning with the decline of towns in the fourth and fifth centuries, Crabtree then details the origins and development of towns in Britain from the 7th century through the Norman Conquest in the mid-eleventh century CE. She also sets the development of early medieval urbanism in Britain within a broader, comparative framework.
